

A Cybersecurity Platform Built for xOT Environments

Visibility, vulnerability management, segmentation validation, threat detection, and investigation, together on the Dragos Intelligence Fabric.

The Challenge Organizations Face

The operational environment is no longer just PLCs and SCADA. It spans engineering workstations, remote access, cloud and AI systems, facility infrastructure, and the data centers that keep operations running. This is Extended Operational Technology (xOT). Adversaries operate across all of it, and a disruption anywhere can stop production or put safety at risk. Defending xOT takes technology, intelligence, and expertise built specifically for it.

How the Dragos Platform Helps

Securing operations requires knowing what you have, how it connects, and what puts it at risk. The Dragos Platform brings xOT visibility, segmentation, vulnerability management, threat detection, and investigation together with the Dragos Intelligence Fabric, so your team can understand exposure, prioritize work, and respond with the operational context each decision requires.

What Your Organization Gains

Full situational awareness

Know every asset in your xOT environment, how it communicates, and what your segmentation actually permits, so nothing operates in a blind spot.

Operational resilience

Find and stop threats before production or safety systems are affected, with monitoring that never puts operations at risk.

Regulatory confidence

A defensible program backed by documentation and continuous monitoring that satisfies regulatory requirements and withstands board and auditor scrutiny.

Prioritized risk reduction

Focus remediation on what matters most with “Now, Next, Never” prioritization, without disrupting operations.

Faster incident resolution

Scope the blast radius, then contain and recover faster with playbooks, intelligence, forensics, and practitioners who have responded to major attacks.

Expanded team capacity

Extend a lean team with OT expertise: Dragos EmberAI guides every analyst, and Dragos OT Watch Complete adds 24/7 hunting, triage, and tuning.

27+

Named threat groups tracked

600+

Organizations protected, including 22 of the top 25 electric utilities and 7 of the top 15 oil and gas companies, plus top manufacturers and water utilities

4.2B

Actions logged annually

A LEADER IN

The Forrester Wave™

Operational Technology Security Solutions, Q3 2026

INDUSTRIES WE PROTECT

Electric • Oil and gas • Chemical • Manufacturing • Water • Transportation • Mining • Food, beverage, and agriculture • Building automation • Data centers • Government

Key Capabilities

Six capabilities on one Platform, from finding every asset to responding without risking operations.

Asset Visibility

Know what supports your operations.
Understand the assets, applications, and software across your xOT environment, with visibility into how they communicate and the vulnerabilities and exposures they introduce.

Segmentation

Prove your segmentation holds.
Reads firewall, router, and switch configurations offline, with no agents, scans, or traffic on the OT network, and shows every access path they permit.

Vulnerability Management

Don't just find vulnerabilities. Fix them.
"Now, Next, Never" shows the 3-6% of OT vulnerabilities that need action now, with CVSS scores corrected for OT and mitigations when patching is not viable.

Threat Detection

Detect threats before operations are disrupted.
Detections built on the adversary behavior Dragos tracks in the field, correlated into one analyst-ready narrative and updated weekly through Knowledge Packs.

Investigation & Response

Know what to do next, without risking operations.
Alerts, asset data, and vulnerability context in one dashboard, with case management and playbooks written by Dragos experts to guide each step.

Dragos EmberAI

The AI that actually knows OT.
An xOT-native AI agent built on the Dragos Intelligence Fabric and grounded in your environment, with guided Skills and structured findings. Analysts approve every action.

Why the Dragos Platform

- 01

Built for xOT.
Deep packet inspection of 600+ industrial protocols, designed for environments where operations cannot afford disruption.
- 02

Intelligence that lives in the Platform.
The Dragos Intelligence Fabric turns over a decade of xOT-specific telemetry, adversary research, and incident response into detections and content that ship directly to the Dragos Platform.
- 03

You don't defend alone.
The Dragos Customer Success team helps you reach value faster and see measurable results, with Dragos Expert Services available from security assessments to 24/7 incident response.
- 04

A partner to operations teams.
Gives operations teams the visibility and context to understand what is happening across their OT environment, a trusted foundation for troubleshooting, resilience, and informed decisions.
- 05

Start where you are.
Enter at any stage of the maturity journey and see a clear path to the next one. No prerequisite blocks you from getting value from Dragos.
