Dragos WorldView
OT Cyber Threat Intelligence

Expert-driven ICS/OT cybersecurity threat research

Dragos WorldView Threat Intelligence is used in security operations centers (SOCs), board rooms, and the physical facilities of electric grids, oil and gas pipelines, water treatment and distribution, and manufacturing plants. By offering actionable insights tailored to the unique needs of operational technology (OT) environments and industrial control systems (ICS), Dragos WorldView helps industrial organizations stay ahead of emerging adversary operations, ensuring the safety and reliability of critical industrial infrastructure.

The Challenge Of OT Cyber Threats

The frequency and sophistication of cyber attacks impacting operational technology (OT) are increasing, posing significant risks to organizations' operations, safety, and finances. Many lack the expertise and resources to address these OT-specific threats and rely on traditional IT-focused security solutions that are inadequate for industrial environments. The shortage of skilled cybersecurity professionals with OT experience and the overwhelming volume of security alerts lead to increased risk in the absence of expertise and actionable guidance.

The Only Threat Intelligence Focused Entirely On OT

Dragos WorldView addresses these challenges by delivering timely, contextual, and actionable threat intelligence tailored explicitly for OT environments. Leveraging the expertise of Dragos teams, organizations can significantly enhance their security posture, reduce detection and response times, and proactively manage risks. Dragos WorldView's comprehensive cyber threat intelligence offers an early warning of OT threats, enriched vulnerability analyses, detailed adversary research, and strategic insights, empowering organizations to make informed decisions and effectively stay ahead of cyber adversaries.

BENEFITS

- Get an early warning and additional information into OT threats.

- Prioritize and address vulnerabilities without disrupting your operations.

- Invest in cybersecurity resources that make an impact.

- Improve your chances of success in your most costly cybersecurity efforts.

Dragos WorldView Capabilities

Dragos leads the industrial cybersecurity market by delivering ICS/OT threat intelligence research with consolidated knowledge and skills gained from hunting adversaries, deconstructing malware, analyzing vulnerabilities, and engineering threat detections, all focusing on industrial operations.

Empower Security Operations

- Indicators of Compromise (IOCs) help provide an early warning of industrial threats before they can pivot to your OT network.
- Enable incident analysis with detailed examinations of malicious files and communications and follow-up actions.
- Integrating WorldView with a SIEM or TIP platform that generates alerts in your security operations center (SOC) ensures that critical risks to ICS/OT are not missed.

Address Vulnerabilities in OT

- Mitigate vulnerabilities faster with enriched vulnerability reports, including refined CVSS scores and alternative mitigations to patching tailored for OT.
- Prioritize risks with detailed impact assessments of public advisories relevant to industrial organizations.

Inform Cybersecurity Planning

- Achieve executive alignment on risks with high-level summaries and strategic insights for informed decision-making and resource allocation.
- Stay updated on threat landscape changes with industry-specific threat intelligence analysis.

OT Threat Hunts & Readiness

- Initiate and support hypothesis-based threat hunts and incident response readiness exercises with in-depth technical analyses of OT malware, adversary tactics, techniques, and procedures (TTPs), and IOCs.
- Stay ahead of adversary threats with immediate assessments of emerging cyber operations and vulnerabilities.

Tailored OT Cyber Threat Intelligence

Analyst-Supported RFI Services

Maintaining a fully resourced in-house cyber threat intelligence (CTI) team with OT expertise is out of reach for organizations just starting. It is still costly for mature organizations with advanced cybersecurity teams.

Dragos WorldView RFIs circumvent the need for proportional increases to internal capabilities in organizations where ICS/OT cyber threat intelligence resources are lacking and in demand without compromising quality or coverage.

Benefits

- Access critical intelligence responses on demand.
- Adaptable services that grow with your organizational needs.

Concierge Analysis Services

For organizations with unique intelligence requirements, Dragos offers Concierge Threat Intelligence for a bespoke curation and analysis of potential threats to your organization. Through this service, Dragos Concierge Analysts uncover threats targeting your company, identify how they can impact your operational technology (OT) networks, and recommend tried-and-true defensive measures so that you can better prepare for, detect, and respond to potential cyber threats.

Benefits

- Significantly improved CTI signal-to-noise ratio.
- Reporting is finely tailored to your operational and industry needs.
- A partner in your cybersecurity journey.
